PDF VIEWER
OVERVIEW

The versatility of a PDF viewer

Almost every user knows: a PDF viewer is not just a display tool for a well known document format. It provides many more functions, runs on a web browser, and serves as an important component of many applications. When you look closer, it is a true miracle.

The majority of the traditional viewers are standalone interactive programs running on a personal computer. But nowadays, PDF viewers are part of web applications running on the HTML and JavaScript platform of a common web browser.

Most navigation functions such as scrolling pages, jumping to bookmarks, zooming, rotating, etc. are self-evident.
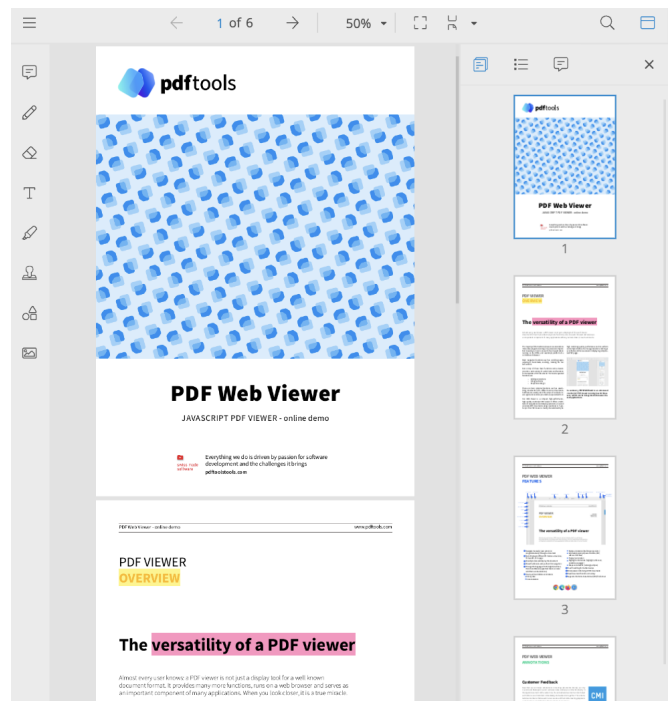

On top of these basic functions, some viewers provide a wide variety of useful tools and functions to manipulate a PDF document. The most requested functions are:

- Adding annotations
- Filling out forms
- Responsive design

There are more complex functions such as assembling documents from different source documents, but these are usually out of the scope of a simple viewer application and are provided as a specialized tool.

Our Web Viewer is a compact, high-performance, high-quality JavaScript PDF viewer. It offers a multitude of navigational and display options to view and annotate PDF documents using JavaScript or TypeScript. This PDF Viewer is mainly characterized by its high rendering quality, performance, and its uniform and simple interface. Our new generation rendering is even faster and more accurate in displaying complicated PDF pages.

In summary, PDF Web Viewer is an advanced JavaScript PDF viewer running in web browsers, which can be integrated in browser-based applications.

OVERVIEW

The versatility of a PDF viewer

Almost every user knows: a PDF viewer is not just a display tool for a well known document format. It provides many more functions, runs on a web browser and serves as an important component of many applications. When you look closer, it is a true miracle.

- ○ Navigate manually (user action) or programmatically through a document
- ○ Select between different fit modes: actual size, fit to width, fit to page
- ○ Rotate and display the document
- ○ Show thumbnails and use them for navigation
- ○ Change the language of GUI (English, German, French and Italian supported. Users can also add their own translations.)
- ○ Create, edit and delete annotations
  - ● Sticky note
  - ● Ink annotation

- ● Stamp annotation (Draft, Approved, etc.)
- ● Add custom stamps (based on PNG, PDF, JPEG or TIFF files)
- ● Freetext annotation
- ● Highlight annotations (highlight, strike out, underline, squiggly)
- ● Shape annotations (rectangle, ellipse)
- ○ Touch handling for mobile devices
- ○ Enter password to decrypt PDF documents
- ○ Read document from file or memory
- ○ Supports the Forms Data Format (FDF) file format

ANNOTATIONS

Customer Feedback

Now that we can make annotations in meeting documents directly, our City Council and Municipal Council can take notes and leave comments directly in the digital document. At the same time, the annotated document can be shared with other council members immediately and worked on together. The annotated documents are then saved in a secure area of the mobile meeting preparation tool and are available for reference whenever necessary.

Priska Zingg
CMI AXIOMA representative, city of Kreuzlingen, CM Informatik AG
